- Magma stone sinks are a mix of handicrafts and innovative, creative and high quality technologies. Using the pioneering spirit, traditional feeling and knowledge of the past decade, it has resulted in what we are today. The company is constantly growing, which can be likened to a success story and continues to generate new ideas. During our trip, we were accompanied well-thought-out and creative staff, sales representatives and strong partners who stood by us with great experience and enthusiasm and supported us for further development. Strong composite granite sink, made of 70-80% natural quartz, is the hardest component of granite. Magma stone sinks with a durable surface and easy to clean, not only look great but also very attractive in terms of price.
